

# 6 Ways to Reduce Infrastructure, Cut Costs and Optimize Print

## Secure Release Anywhere™: Print, track and manage - with mobile first

Pull print technology isn't new, but PrinterOn has reinvented it by providing a unique solution that cost-effectively extends pull printing to mobile users. Only PrinterOn delivers a combined solution that enables secure print, tracking and management of all print workflows whether mobile or desktop. A single, centrally managed solution delivers a consistent user experience, reporting for cost control and compliance, along with increased IT efficiency. All this saves time and money for everyone.

1

### Reduce Waste

20% of all print is waste. Secure Release Anywhere prevents documents from automatically printing. Forgotten documents won't be left on the printer and end up in the recycling bin.

2

### Increase Security

Requiring authentication at the printer adds a further layer of security to corporate data by virtually assuring that no physical prints are left behind.

3

### Reduce Infrastructure

Eliminate expensive personal printers that require more maintenance and consumables. With PrinterOn, every enabled printer on the network is secure.

4

### Reduce Need for Print Servers

PrinterOn requires only one print server on your corporate network to run your entire print system so there is no need to purchase extra hardware for each remote location.

5

### Increase Productivity

Users can pick their printer after submission and release documents from any enabled printer near them. Batch printing can be held in queue for release at a later time during the day requiring only one trip to the printer.

6

### Reduce Support Calls

Printing problems are the second most common support call after password resets. Reduce those calls by providing users the ability to release documents from another printer if one is out of service.
