- > 4 printing methods to choose from: email, mobile apps, web upload, driver
- > Secure release of documents provides confidentiality to users

PrinterOn for Small & Medium Businesses (SMB)

Secure, mobile printing for smartphones, tablets and laptops

Business professionals are constantly on-the-go and corporate guests and visiting suppliers are frequently at your location. Providing a way for them to print without having to configure and connect to secured networks is a problem that many IT departments face today. The PrinterOn Mobile Printing Solution enables employees and guests to print to corporate printers without connecting to secure networks or downloading drivers.

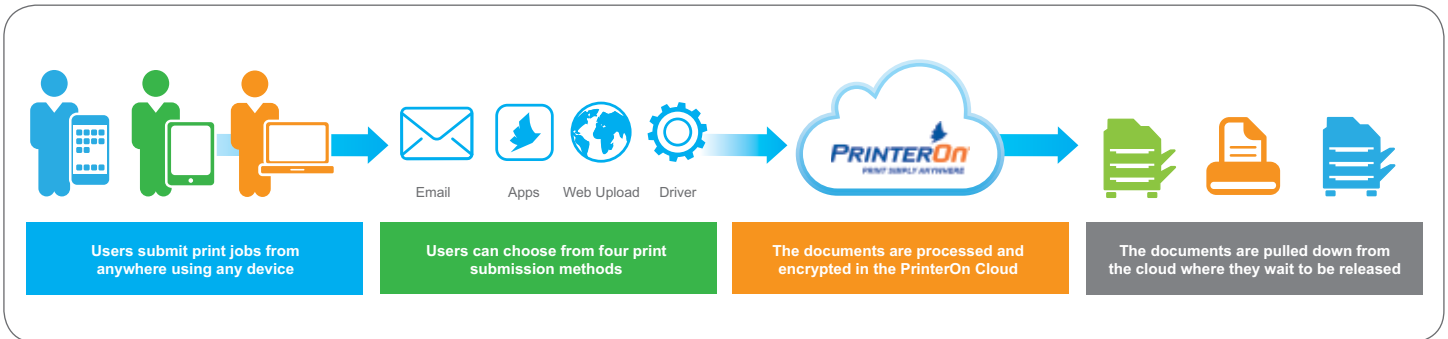

PrinterOn provides the power to print documents from mobile and desktop devices to printers in the office or at any PrinterOn public printing location. Users can print by using one of the mobile apps for iOS or Android, emailing documents to a printer's unique email address, uploading documents to a web printing portal or by using the PrintWhere® driver from within any Windows application. After submission, a release code is sent back and it is entered on the keypad at the printer to release documents.

Deployment Options

The flexibility of the PrinterOn platform is what makes it such a desirable choice for SMBs. Choose a hardware deployment using the PrintConnect device and PrintValet print release keypad, a software deployment on a PC using the Print Delivery Station software or a Ricoh HotSpot printer with embedded PrinterOn technology. Either way, you will be providing employees and guests with the most widely used mobile printing solution in the world.

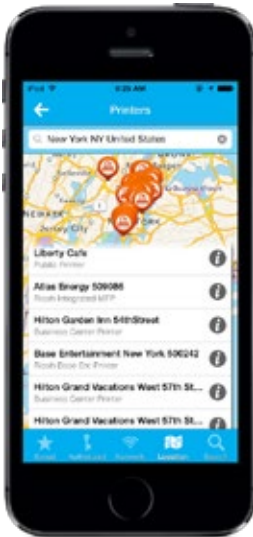

PrinterOn Mobile Printing Workflow

Mobile Apps for Easy Searching and Printing

The PrinterOn mobile printing apps make searching for and printing to corporate and public printing locations quick and easy. The apps in conjunction with the PrinterOn platform make finding a printer easy through various discovery methods, so no matter where a user is, they can find the printer nearest to them at any time.

Location

Uses the GPS function of a device to show PrinterOn enabled printers nearby

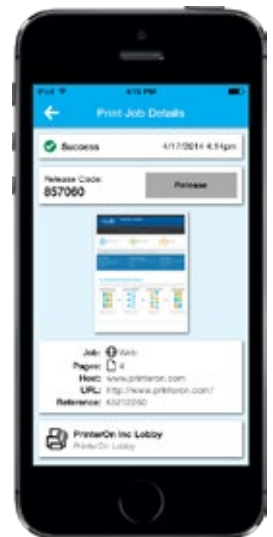

QR Codes

Scan QR code on printer to get printer details and save to your favorites

Print Preview

View documents before printing, choose number of copies and pages

Remote Release

Releasing documents directly from the app provides a fluid workflow
