

PrinterOn Enterprise provides secure remote printing for legal firm's temporary offices.

Benefits & Results

- ✓ Lawyers at remote offices can now print securely through the corporate network from laptops and PCs
- ✓ Mobile print also provided so lawyers can print securely from their mobile devices
- ✓ Easier for IT, the time to set up remote office print environments is reduced
- ✓ Lawyers can be more productive while traveling with mobile print capability

Background

Based in a major city in the United States, this law firm is one of the largest global law firms with key business centers in the Americas, Asia and Europe. They provide legal services in areas such as Supreme Court, finance, real estate, intellectual property, government and environmental.

Challenge

The firm often has court cases in cities where company offices don't exist. These cases can last for months at a time. Remote or temporary offices must be set up to support lawyers working on cases while away from their main office. Setting up secure printing at these remote law offices was labor intensive and technically complicated, especially given the short time frame. There was also no support for printing from mobile devices.

Solution

They chose to deploy PrinterOn Enterprise to provide secure **remote printing** as well as mobile printing. At each remote office, PrinterOn Print Delivery Station (PDS) was deployed to connect printers to the PrinterOn

Enterprise server back at the main headquarters. With PDS, these remote locations are now connected to the corporate secure network

With PrinterOn, the firm's remote offices are running seamlessly. They now have a secure mobile printing solution that meets their needs and allows them to easily set-up print environments at any remote location throughout the world. With printing problems solved, they can spend more time on the needs of their clients.
