

# PaperCut<sup>MF</sup> Feature

## JOB TICKETING

Job Ticketing controls and automates every kind of specialty printing – 3D printing, production printing, laser cutting, and anything else in a print room or FabLab – all in one place. For users, it's a simple and welcoming storefront for more finicky printing. And for operators, it's a powerful workflow tool to manage and fulfill jobs with ease.

### OVERVIEW

#### Job Ticketing in your FabLab

Ordinary 3D printing solutions are ace for actual printing. But for submission, management and charging? Not so much. That's where Job Ticketing is different.

It's about making 3D and specialty printing workflows simple, intuitive, and automatic. It's about engaging people without intimidating them. It's about giving operators the tools to keep things working beautifully.

#### Job Ticketing in your print room

Print rooms are pretty great at printing. But how they handle the admin side of things is where they can fall down – and where Job Ticketing picks them up.

By tracking and managing all activity, Job Ticketing does away with pesky print room problems. No more easily lost email and paper forms; no more charging and quoting across multiple departments; no more frustration.

#### Run a more modest setup?

With up to five products and a customizable workflow, Job Ticketing for Mini Rooms is the best way to manage your small-scale specialty and regular printing for a lot less.
