PSIcapture

PSIcapture Filebound Migration

Optimize Filebound with Compatible Capture and Indexing

Many industries, from education and healthcare to manufacturing and legal, rely on Upland Filebound to help streamline their paper processes. PSIcapture has a convenient direct integration with Filebound, which makes the process of moving documents into Filebound extremely simple.

The integration allows you to determine everything from the structure of the documents to the naming conventions you want to use and the metadata fields you want to populate. When you run your PSIcapture workflow, the data that is extracted can be used to populate the index fields within your Filebound application.

If your business uses Filebound for document management, pairing with PSIcapture is the optimal way to capture and route documents into your Filebound application. Automate the capture and indexing process for a streamlined document management workflow that can save your organization time and money—making your business truly efficient.

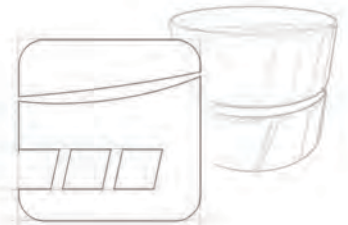

FileBound

FileBound

by upland

Documents are captured using traditional capture tools such as scanners, MFPs, networked scanners, or via watched folders.

PSIcapture processes, separates, names, and provides folder structure.

Documents are migrated into multi-level folders in Upland Filebound.

PSIGEN is the innovative leader in advanced capture applications dedicated to helping companies automate document processing by extracting data and utilizing it to name, index, format and route documents along the electronic path to storage. The lasting result is a more productive end user, using fewer mouse clicks and keystrokes, accomplishing complex and powerful document workflows.
