## PSIcapture M-Files Migration

### Maximize M-Files Capabilities with PSIcapture

M-Files is used in many organizations as an enterprise content management tool to help manage information. PSIcapture can take your M-Files system a step further by easily, quickly and automatically capturing documents into M-Files.

PSIcapture's direct integration for M-Files allows you to select the class and vault where the documents will be routed for a seamless migration into your M-Files repository. The automated solution requires very minimal end-user intervention and the end result is documents that are searchable, indexed, properly named and stored in your M-Files application for easy access.

The PSIcapture integration with M-Files provides a full document management solution from start to finish. Scan your documents from any device—MFP, fax, desktop scanner, RightFax server—or import documents from a network folder, process the documents through PSIcapture, where you can extract data, and automatically route the documents to your M-Files repository.

Documents are captured using traditional capture tools such as scanners, MFPs, networked scanners, or via watched folders.

PSIcapture processes, separates, names, and provides folder structure.

Documents are migrated to the appropriate M-Files vaults and tagged with metadata for searchability.

PSIGEN is the innovative leader in advanced capture applications dedicated to helping companies automate document processing by extracting data and utilizing it to name, index, format and route documents along the electronic path to storage. The lasting result is a more productive end user, using fewer mouse clicks and keystrokes, accomplishing complex and powerful document workflows.
