

# PaperCut™

# 19.2

Strengthen the 19.1 release features with

- Enhanced Print Deploy features
- Easier deployments of PaperCut MF
- Scanned document processing enhancements

## Enable Printing

Print Deploy-More control, more operating systems

Print Deploy takes the complexity out of print queue deployment by getting the right driver and right print queue to the right person in the right location, automatically.

### Features/Updates

- Supporting all operating systems - Windows, Mac and Chromebook (Linux coming)
- User group printer driver and queue management
- Translated to non-English languages

## Enhanced MFD Deployment\*

Resellers and sys admins can rapidly deploy through remote setup of MFD fleets with PaperCut.

### Features/Updates

- No onsite technical resources required
- Remotely associate MFDs to the PaperCut App Server
- Update certificates (Kyocera only)
- Faster rollouts of printer fleets
  - Bulk configuration for larger installs - really handy for large enterprise customers
  - Configuring site servers with your devices have been streamlined

\*Xerox , Konica Minolta, Toshiba, HP

### Problem

Deploying print queues is time consuming and often very frustrating for IT teams supporting complex environments

### Solutions

Print Deploy simplifies the complexity of print queue deployment and comes as part of PaperCut MF and NG

### Benefit

Significant time saving through easy deployment of the right print drivers and queues to the right people in the right locations

### Problem

Setting up PaperCut on MFDs is manually intensive and a repetitive process for large roll outs

### Solutions

Have a simple way to remotely deploy and configure embedded software

### Benefit

Installing PaperCut embedded software for large fleets can now be done in less than half the time!

ACDI

## Document Processing & OCR Scanning Enhancements

Enhanced functionality for the On-Prem OCR & Document Processing Pack means less manual work digitizing documents.

### Features/Updates

- Batch Splitting, by page count or on blank page
- Blank Page Removal can be used by itself, or in combination with batch splitting
- Image quality enhancements with deskew and despeckle for your whole fleet with one click
- Multi-server OCR & Document Processing engine graduated from Percolator for locally hosted scaling power

### PaperCut 19.1.3 Update

## New Canon embedded Gen 3+ (MEAP)

Canon users are able to do more at the MFD using PaperCut, which makes them more productive.

### Features/Updates

- Now includes managed and secure Integrated Scanning
- Consistent and easy experience across multiple brands and models, now including Canon multifunction Gen3 devices.
- Simple to install and use all-in-one integrated interface

#### Problem

Scanning batches of documents still takes a lot of manual work before and after

#### Solutions

We've added easy batch splitting and document processing features to PaperCut

#### Benefit

Customers can now automatically split and enhance batches of documents

#### Problem

Canon users can't:

- Use PaperCut to do scanning, which makes scanning complex
- Make last minute changes and add an account to charge a print job
- Automatically enhance their scans (eg OCR)

#### Solutions

Canon users can now scan, make changes to their print jobs and enhance scans all within PaperCut

#### Benefit

The new streamlined experience gives users access to all PaperCut's scan enhancements and advanced print features

## We've also packed in some new and important features...

- Long awaited Single function printer support for Ricoh and Xerox devices, which means further cost reductions when rolling out PaperCut MF in mixed MFD and printer fleet environments.
- Reduce your time at the MFD when scanning on Ricoh devices with the new one button press "continue scanning" feature.
- Let's not forget the important changes within Custom Reporting... we've cleared the runway with no more limitations on the number of generated reports. If you're using business intelligence solutions like Tableau and PowerBI then no problem...just export your data to CSV!
